Why Sex? • The Red Queen Theory - "It takes all the running you can do, to keep in the same place" Red Queen - 'Alice in Wonderland' • Parasite-host interactions - Sexual reproduction persists because it enables species to rapidly evolve new genetic defenses against parasites • Guppy and snail species exhibit sexual reproduction

Adaptive value of sex in microbial pathogens

Another form of epistasis is based on Red Queen coevolution (Bell, 1982) and one particular form of the Red Queen hypothesis postulates that the main selective force maintaining sex is protection against parasites and pathogens (Hamilton, 1980; Seger and Hamilton, 1988) Population genetic analysis of this model has shown that the epistasis

Alice and the Red Queen are running as fast as they can and Alice says, "Isn't this curious, as fast as we run, nothing seems to change We're staying in the same place" The Red Queen answers, "Yes, you have to run just as fast as you can to stay in the same place" Evolution is like that too We live in a complex world full of
